

Remote Control Operation

At FutureSafe we believe its not only essential to have the best protection possible but also to make it user friendly to ensure it is used which is why we pioneered the use of remote controls in alarm systems.

30 Meters range letting you operate it both inside and outside your home.

Arming & Disarming Your Alarm

Pressing the Black Button once fully arms the system its easiest to do this from outside as the alarm must be in the ready state IE nobody activating PIRs for it to arm.

The Blue Strobe will flash several times and beep once to confirm the system is armed.

When you come home press the black button again to disarm the alarm the external siren will beep twice and the strobe flash to confirm the system is off

Activating Partial “Home Mode”

When going to sleep for the night press the green button this will activate Partial mode IE downstairs on but upstairs off.

Pressing either button in the morning will disarm the system.

Activating the Panic Button

Holding down both buttons for 2½ seconds will activate the panic button and all sirens and strobes will activate.

This can be set to silent alarm also.

If your system is a Back to Base monitored alarm we will than receive your panic alarm call at our monitoring station and send the police.
